# Ball Lock Selection Guide

## How To Use This Guide

1. Review the "How the Ball Lock Mounting System Works" section for an overview of the system and components
2. Select a specific machine tool model and subplate.
  - a. The opening machine model page includes the machine table specifications used for that machine.
  - b. The following page/pages contain specific subplates designed for that machine model and table specifications.
  - c. Each subplate page lists the color coded fixture plates that will fit that subplate. Each machine may have one or more subplate/fixture plate combinations.
  - d. Use the "fixture plate examples" contained in the guide to help select a fixture plate for typical applications. Fixture plates are color coded to assist in using the example when selecting it for a specific machine.
  - e. Use the check boxes to identify subplates to be selected. You can then print these pages for reference when preparing a request for quote or placing an order.
3. Use the "Subplate Mounting and Quote Form" to assist in selecting the required subplate mounting components.
  - a. This form lists the required mounting hardware for each subplate you select.
  - b. You can fill in the number of subplates into the form for reference.
  - c. The mounting hardware listed is for one subplate. When requesting a quote or ordering more than one subplate, the total components required must be increased accordingly.
4. Use the "Fixture Plate and Vise Quote Form" to assist in selecting the required fixture plates and ball lock shanks required for mounting.
  - a. This form lists the ball lock shanks and part number for each subplate selected.

As always, please do not hesitate to contact Jergens Workholding Solutions for engineering assistance.

## The Ball Lock® Configurator Tool

Jergens Workholding Solution group also has an On-Line Configurator Tool called the Ball Lock® Wizard. This tool allows the user to create a configured system of subplates, fixture plates and vises to design a quick change system that will work for your machine tool make and model. The on line program is available on:

<http://www.jergensinc.com> OR <http://jergens.configurators.com/ext/Login>

# How the Ball Lock® Mounting System Works

**MACHINE TABLES** come in various sizes, t-slot sizes, number of t-slots and also drilled & tapped configurations.

**SUBPLATES** can be made to suit your needs in addressing your manufacturing quick-change requirements.

**SINE FIXTURE KEYS** are used to align the subplate to a t-slotted table during the installation of the subplate to your machine table.

**T-SLOT NUTS** are used in the fastening of the subplate to the machine table.

**SOCKET HEAD CAP SCREW'S** are installed thru the subplate and into the t-slot nuts to lock down the subplate to the machine table.

**BALL LOCK® BASE VISES OR FIXTURE PLATES** allow you to change out your vises or fixture in minutes within +/- .0005 repeatability versus hours of set-up and indicating in the vise or fixture.

**BALL LOCK® SHANKS** are used to locate and lock the vises or fixtures to the receiver bushings installed in the subplate with 2-1/2 turns to lock or release with low torque and high clamping forces.

## FIXTURE PLATES

Shown below are color coded to assist in determining the various subplate options to best suit your manufacturing quick change requirements.
